Montreal, QC, Canada

EDUCATION

BS	Universidad Nacional de Colombia, Sede Bogotá Computer and Systems Engineering Ingeniería de Sistemas y Computación	July 2017 - July 2022 GPA: 4.4/5.0
MEng	Concordia University Software Engineering	January 2024 - Present -

EXPERIENCE

DXC TECHNOLOGY	January – August 2022 <i>College Intern:</i> Fullstack Software developer. Supporting the team in the delivery of a new web application for a bank. Currently deployed. Software support team member. Angular, TS, SASS, SQL, Java. JRIA. SCRUM. September 2022 – December 2023 <i>ITO Svc Delivery Rep V:</i> Fullstack Software developer. Support team member. Third level software support engineer for a bank, in charge of their digital channels. Angular, TS, SASS, SQL, Java. JRIA. SCRUM.
-----------------------	--

ACHIEVEMENTS

2017. *Top 5 admission scholarship:* Top 5 test score of the admission exam at Universidad Nacional for the program of Computer and Systems Engineering. Granted a scholarship for the first semester.
2022. *Night of the best – National education ministry:* Recognition for obtaining one of the best scores nationwide in the Saber Pro exam.

PROJECTS EXPERIENCE

Final Project Software Engineering II	August – December 2020 <i>Easy PC:</i> Web app that helps inexperienced users that want to build a custom PC but do not have the technical knowledge required. Developed as a team using Vue.js and bootstrap for the frontend component, and using MySQL, Java SpringBoot for the backend. OAUTH used for authentication. Deployed using Heroku and Firebase. SCRUM use.
Final Project Software Architecture	January – August 2021 <i>Park-in-space:</i> Web and mobile app that allows drivers to locate parking near their destinations and real-time information such as availability and price. Developed as a team using React and Kotlin, for the frontend. Backend consisted of several microservices, each one with a different programming language: Ruby, Go, JavaScript, Java, and Python. SpringBoot, MySQL and MongoDB were used. GraphQL and REST used as connectors. LDAP used for authentication. The app consumed Google Maps API. Deployed using AWS, Azure, and Google Kubernetes Engine to ensure scalability.
Final Interdisciplinary Projects Workshop	October 2021 – February 2022 <i>Information system for public lighting in San José del Guaviare:</i> Web application that allows the public service provider to have geolocated control of the inventory of public lighting. Development of the front end by myself, using React and the Google Maps API. The backend was built on SpringBoot. Deployed using Firebase and Heroku. Currently in phase 2 of development financed by the LIATER group of the National University of Colombia.

LANGUAGES

Spanish: Native Language **English:** Advanced Listening, Reading, Writing, and Speaking

SKILLS

Programming: Java, C/C++, Python, SQL, HTML/CSS, JavaScript, Angular, Vue.js, React, SpringBoot
Applications/Platforms: GitHub, Git flow, JIRA, VSCode, Cloud **OS:** Linux, MacOS, Windows
