

Nov 12, 2025

To Whom It May Concern,

I am writing to provide a positive recommendation for **Andres Ardila** for **Software Engineer roles** at your company. Andres interned as a **Software Engineer Intern** on the Storage team at Lyft from May 20, 2025 to August 8, 2025. In my capacity as his manager on the Storage team, I have had the pleasure of working with Andres for the entire 12 weeks and have been consistently impressed by his technical skill, initiative, and judgment that he demonstrated throughout his internship.

During his time at Lyft, Andres delivered on a project that aimed at improving developer productivity for Lyft's product engineers with the goal to reduce the Storage team's operational burden. Andres consistently met expectations across key areas and performed on par with Lyft's expectations for a Software Engineer at his level. His commitment to technical excellence is reflected in his consistently high-quality deliverables, making him a strong and reliable asset for any project. His maturity in handling complex workflows and his ability to deliver reliable, cross-cutting solutions make him a strong candidate for any full-time Software Engineer role and an asset to any team.

Beyond his technical and professional abilities, Andres also brings a positive attitude, curiosity, and strong collaboration skills. His curiosity, evident in his constant pursuit of new ideas, truly sets him apart. He is a highly supportive and collaborative partner, always willing to provide assistance and ensure collective success for the team. Furthermore, his continuous learning and ability to quickly grasp concepts demonstrate his potential as a remarkable engineer. It was a genuine pleasure and a valuable opportunity to collaborate with Andres, and I am confident that any team would greatly benefit from his contributions.

I wholeheartedly recommend Andres for any full-time Software Engineer position. Please feel free to contact me at iitimi@lyft.com if you would like any additional information.

Sincerely,
Ibukun Itimi
Engineering Manager, Foundational Infrastructure, Lyft
